Summary

Research scientist with more than ten years of experience in machine learning, gradient-free optimization, dynamical systems, and neural interfaces. My greatest strength is iterating between mathematics, physics, numerical methods, and software engineering. I am looking for a research scientist or engineer role at a company which is advancing artificial intelligence.

Education

PhD Neuroengineering — 2010 - 2014
University of Wisconsin-Madison
- NIH Fellowship, Neuroengineering Training Program
- Developed multiple bidirectional optoelectronic neural interface systems [1-5]
- Developed the first fully transparent thin-film neural interfaces with graphene [2-4]
- My R&D led to the founding of NeuroOne (Nasdaq: NMTC) [1, 3, 4]
- First author: 2 x J Neural Engineering, J Cerebral Blood Flow
- Co-author: 12 papers

MS Biomedical Engineering — 2008 - 2010
University of Wisconsin-Madison
- Led neural interface systems integration, experimental design, and analysis [1-4]
- Raised microfabricated connection yield from 50% to 95% [1, 2]
- First author: J Neural Engineering, Co-author: 3 papers

BS Biomedical Engineering — 2006 - 2008
Washington University in St. Louis
- Scholarship, McKelvey dual degree engineering
- Finite element modeling of protein electrostatics

BS Mathematics — 2003 - 2006
Northland College
- Summa cum laude, graduated in 3 years with 128 credits
- Researched wave propagation in spiking neural networks

Research Experience

Mayo Clinic — Sep 2019 – present
Research Scientist — Jan 2024 - present
- Stability analysis (control theory) of continuous-time recurrent neural networks with dynamic parameters, eigenanalysis and Lyapunov exponents. [7, in submission]
- Researched data-driven modeling of fractional and stochastic dynamical systems.
- From scratch, then on a stack: PyTorch, Hydra, Git, Docker, SLURM, GCP, AWS
- System identification of latent variables to map the seizure network. [in prep]
- First author: Frontiers in Computational Neuroscience, Co-author: 2 papers

Postdoctoral Fellow, Engineer — Apr 2021 - Dec 2023
- Performed electrical brain stimulation experiments in 45 patients and used machine learning to classify neural responses.
- Co-author: 4 papers, 1 conference paper

Postdoctoral Fellow, Engineer — Sep 2019 - Mar 2021
- Built a platform for research in the operating room with awake patients
- Captured 50 surgeries with five simultaneous time series data streams
- One patent, one first-author conference paper

University of Minnesota — Oct 2017 - Sep 2019
Senior Fellow
- Built a closed-loop system that optimizes the stimulation waveform in real time using Bayesian optimization with a Gaussian-process regression surrogate [8]
- Proposed that a thermal mechanism explains the inhibitory effect of focused ultrasound based on the time constant and designed an independent laser-heating experiment that reproduced the effect, supporting the mechanism. [9]
- Co-first author: Brain, Co-author: 3 papers

University of Washington, Seattle — Jul 2014 - Sep 2017
Senior Fellow
- Fellowship, Washington Research Foundation
- Designed, instrumented, and conducted all experiments for the system identification of neurovascular coupling with optogenetics. [6]
- Built a recurrent neural network (RNN) model of seizure propagation.
- Redesigned and carried out experiments validating an optogenetic silver nanowire neural interface with collaborators at MIT. [10]
- Co-author: J Neurophysiology, Dev Neurobiology, J Neural Engineering, Science Advances

Contributions

34 peer-reviewed papers, 30 first-author conference abstracts, 4 conference papers, 2 patents
